

The Science Behind the Scan

- How Visera Link Works

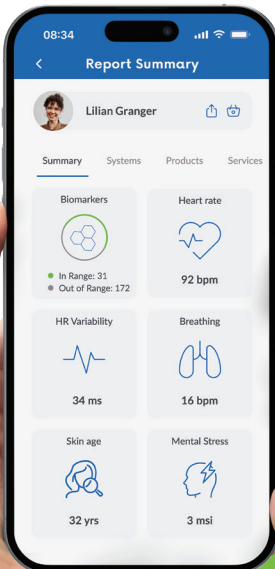

Visera Link uses your smartphone camera to scan blood-flow patterns in your face and reveal real-time wellness insight. But how?

It's powered by
Transdermal Optical Imaging (TOI)

What is TOI?

Transdermal Optical Imaging (TOI) is a light based tech that uses your smartphone camera to safely detect subtle changes in facial blood flow—no contact or extra equipment needed.

These changes reveal shifts in your body's wellness state in real time.

Link analyzes vital wellness metrics, including:

- Heart rate & heart rate variability
- Breathing rate
- Mental stress index
- Facial skin age

All delivered in a clear, personalized report.
