

## What Is a Link Scan?

A Link scan is a fast, contactless way to explore how your body may be responding to everyday wellness challenges.

It uses advanced biometric technology to measure real-time signals from your face—without storing or saving your image — and delivers a personalized wellness report in just seconds.

This scan is not diagnostic.

It does not detect illness or tell you what’s “wrong.”

Instead, it offers insight into your body’s energetic patterns to support informed wellness decisions.

## What Technology Does It Use?

Link uses Transdermal Optical Imaging (TOI)—a safe, non-invasive method that analyzes micro-blood flow in your face using a standard smartphone.

- No images or facial data are saved
- The scan is real-time only and completed in 30 seconds
- Measures subtle shifts in wellness-related patterns
- Generates a visual wellness report based on your body’s energetic signals

TOI is a next-generation wellness tool designed for everyday use with convenience, comfort, and privacy in mind.

## What Can I Expect from a Scan?

- The scan uses your smartphone—no equipment, no contact, and no stored images.
- You’ll simply look at your screen while the scan runs.
- In moments, you’ll receive a personalized report with insight into your wellness trends.

### Most importantly:

This scan is a tool for awareness and empowerment—not a diagnostic test or medical assessment.

Visera Link gives you a private, practical way to understand your body’s wellness signals.
